Object: application for the Data & Insights Intern

Dear Mrs./Mr.,

Student in the third year of the Department of Computer Science in National Institute of Applied Sciences of Lyon (in French INSA de Lyon), I am thrilled to hear about the program of data internship at FIFA.

First, I would like to introduce my study path. I had arrived in France to begin the preparatory cycle for engineering school in 2019. After two years mostly based on Mathematics, Physics and Computer Science, I was admitted to the Department of Computer Science of INSA de Lyon. In France, I have studied the core knowledge of Computer Science. Now, I am currently an intern at Astrophysical Research Center of Lyon (C.R.A.L). I use Python scripts to analyze the variation of Line Spread Function from the data of the instrument HARMONI of European Southern Observatory. This experience helps me to find out my orientation of becoming a data analyst.

The FIFA internship is a great opportunity for me to explore the field of Data Analytics. From what I studied at school and from my actual internship, I found out that many models of Machine Learning and algorithms for AI could be applied for analyzing the data, especially in science for football. And if I was admitted to the internship program, I could have a great environment to self-develop and to work in a team. I also realize that my experience at C.R.A.L is very useful for task of analyzing the data from FIFA.

Very involved, I absolutely know how to invest myself fully. Persevering, dynamic, curious, and having an analytical mind, I would be able to take advantage of your insights during the internship period. I also have experiences after many computer-science projects that I did during my studies and my current internship.

I look forward to your kind consideration for this upcoming position. I am always available to contact via email or telephone if you want to know more about myself as a potential candidate.

Sincerely,

NGO Ngoc Minh
